Overview

Topics:

1. Introduction to LyX
2. Introduction to LaTex
3. Getting LaTex output from Stata

Chapter 1

Introduction to LyX

We will start off by understanding what LyX is an how we can use it for economic publication quality reports. We will discuss what is LyX and how we can install it onto our machine. Next, we will go through LyX's Tutorial and use the Example document.

1.1 What you see is what you get (WYSIWYG) LaTex word processor

We are able to use LaTex documents without knowing too much LaTex ourselves with LyX. We can insert LaTex code into a LyX document, but with LyX this is not necesary. We will want to understand some of the basic of LaTex, so we can incorporate mathematical equations. We will cover this in the next chapter.

1.2 Install LyX

1.2.1 Windows Installation

Please see: https://wiki.lyx.org/Windows/WindowsSetup

1.2.2 OSX Installation

Please see: https://www.baeldung.com/cs/lyx-installation or https://wiki.lyx.org/Mac/Mac

1.3 LyX Tutorial

After we launch the LyX tutorial, we will want to open a new document. Go to File → New or click on the following:

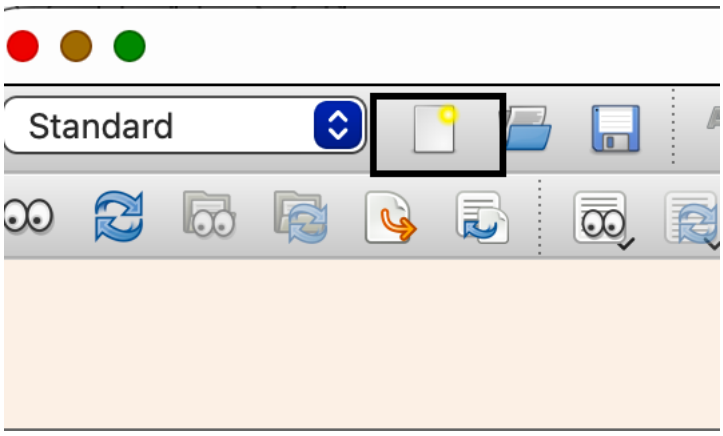

Figure 1.1: New Document

1.3.1 Select Document Class

Go to Document → Settings.

Make sure "Article Standard Class" is selected. This will provide the sections that we need for our document.

Now go back to the main window and look to the upper left to see the Envionment window. It should should the word "Standard".

1.3.2 Sections

After selecting "Standard" in the Environment window, go to "Section" under "Sectioning".

This will create a new section, which will look like this. Next, we can enter our section header, which will be "Introduction" for this example.

Next, press "Enter" and begin to type your introduction paragraph.

1.3.3 Subsections

After your introduction paragraph(s), press enter for a new paragraph. You will notice that the new paragraph is indented. We will type the word "Background"

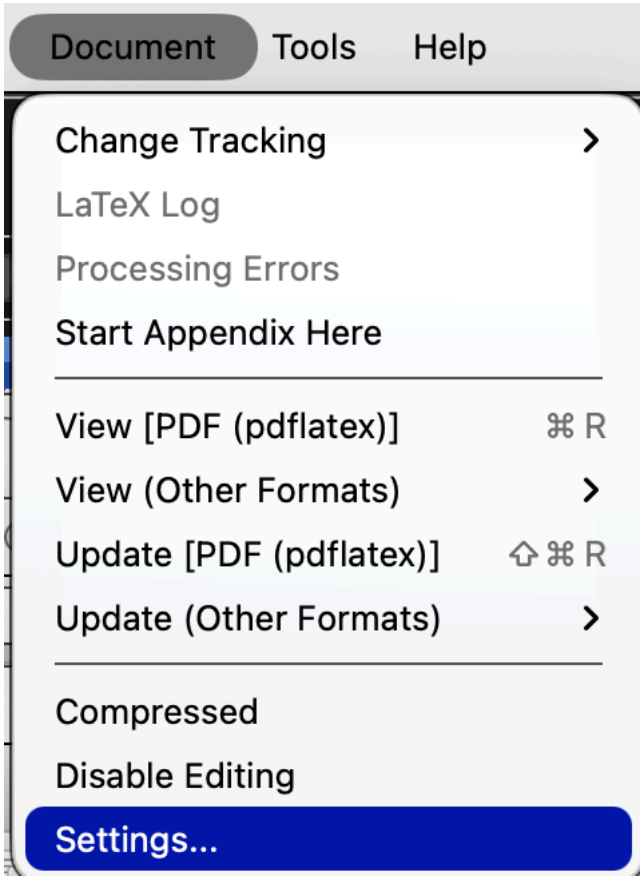

Figure 1.2: Lyx Document Settings

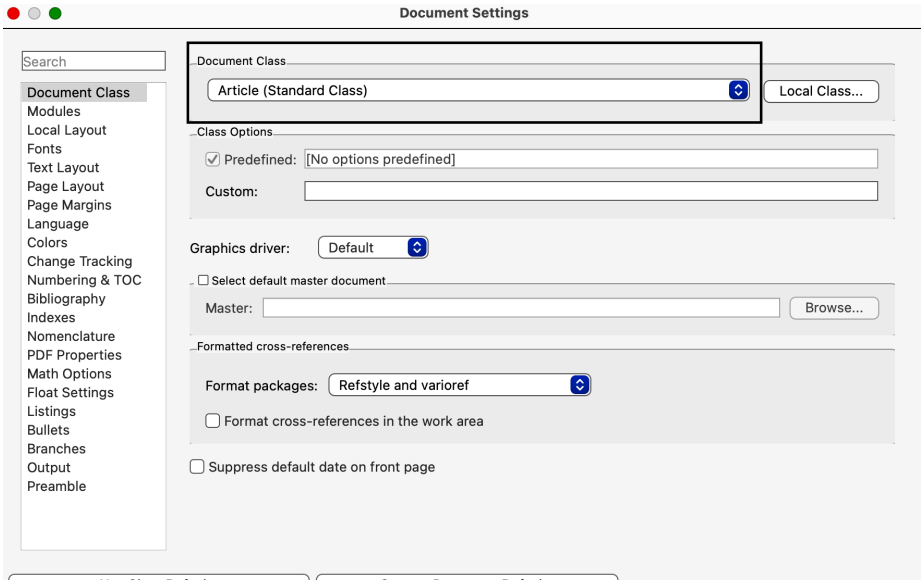

Figure 1.3: Article Standard Class

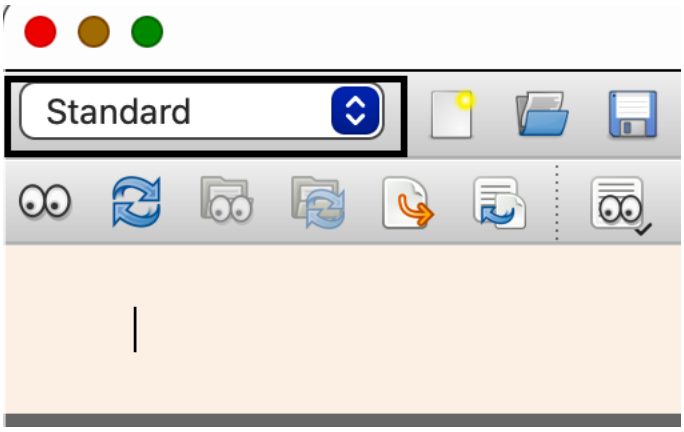

Figure 1.4: LyX Style Window

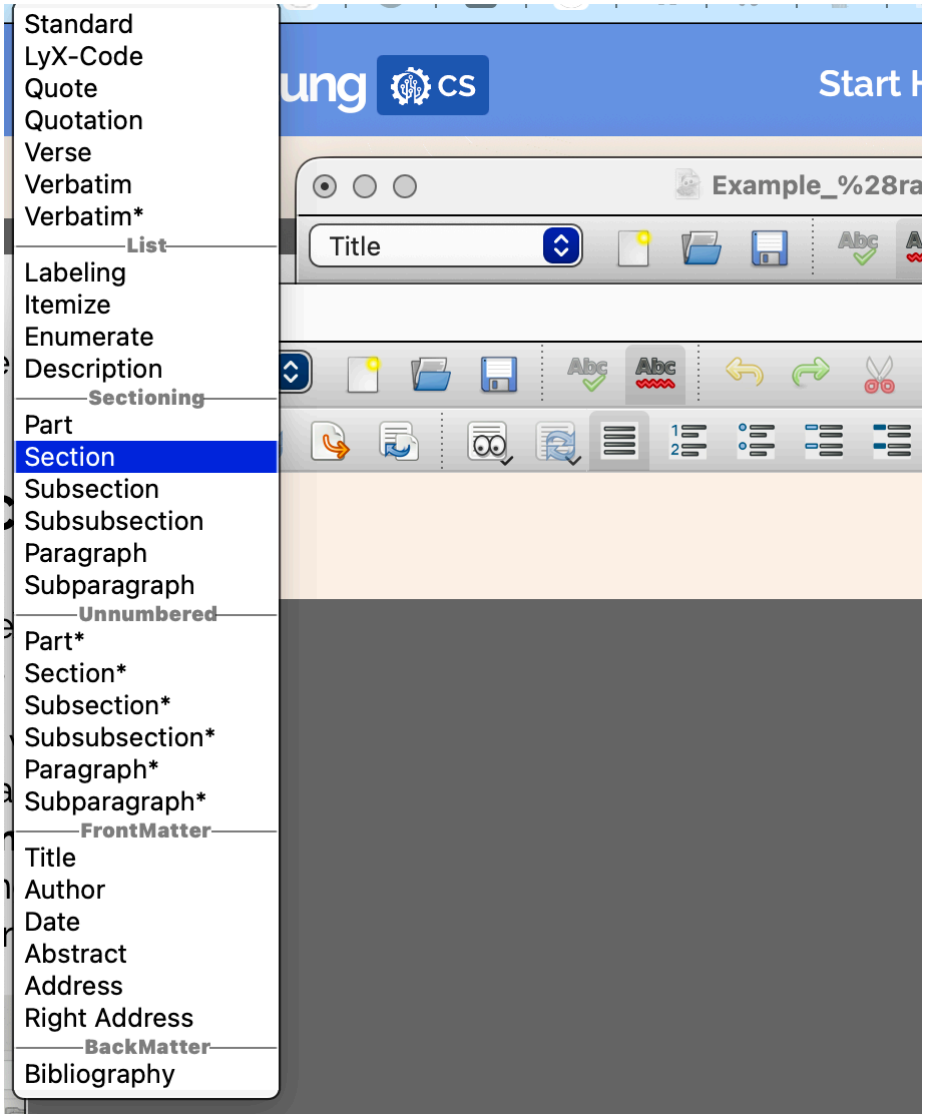

Figure 1.5: LyX Environment Window

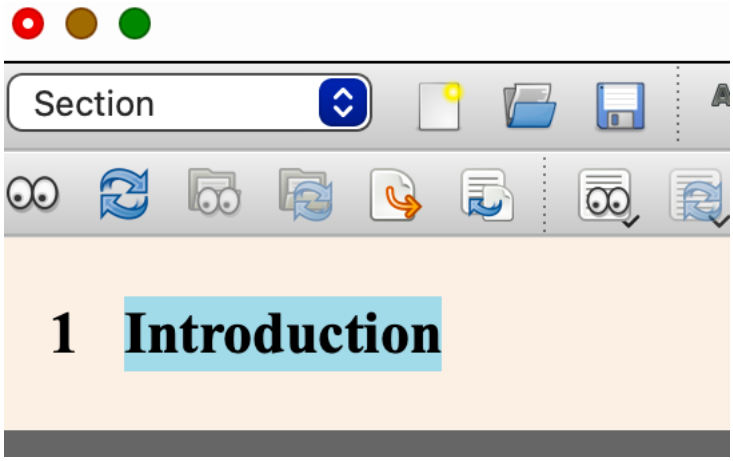

Figure 1.6: LyX Numbered Section 1

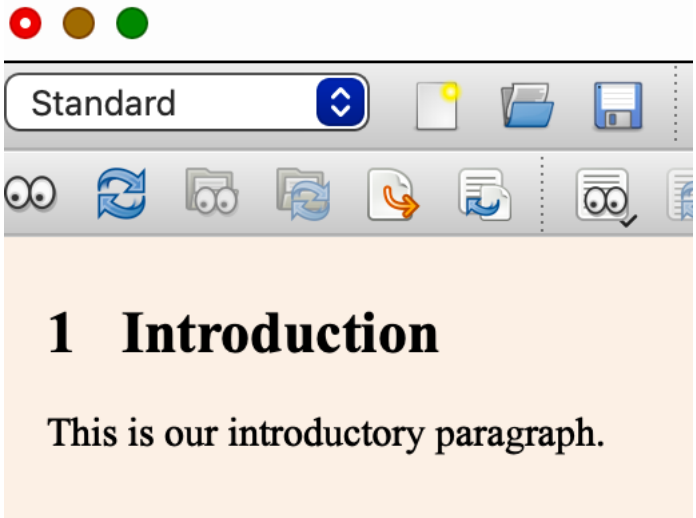

Figure 1.7: Introductory paragraph

for our first subsection. It will look like the following:

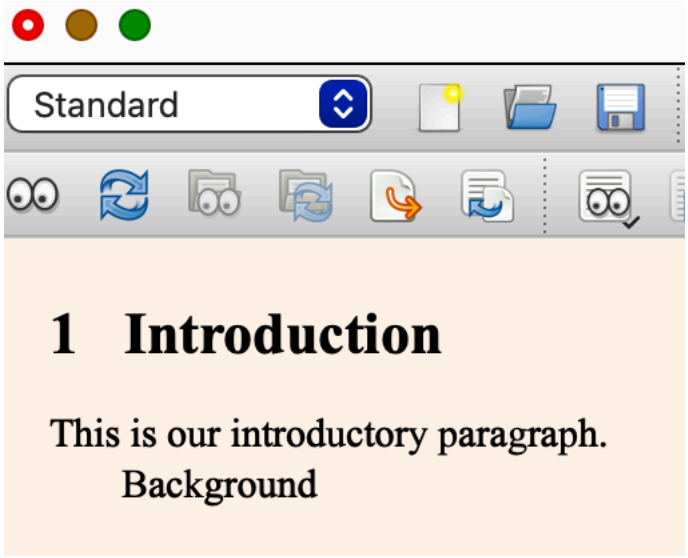

Figure 1.8: New paragraph indented

Now go back to the Environment window and select "Subsection" under "Sectioning".

The result will be that "Background" becomes subsection 1.1.

We can do this several subsections. We will create "Theory" and "Literature Review" subsections.

1.3.4 Preview our work

Now that we have created our first section. Let's preview what our pdf will look like. Click the preview button to see the preview.

1.3.5 Title, Author, and Abstract

Let's add a title to our article. Go to the first line and enter your title of the article. In this example, we will call the article "Econ 643 LyX Example".

Go back to the Environment window and select "Title" under "Front Matter".

Select "Title" and your title will become a title for your article.

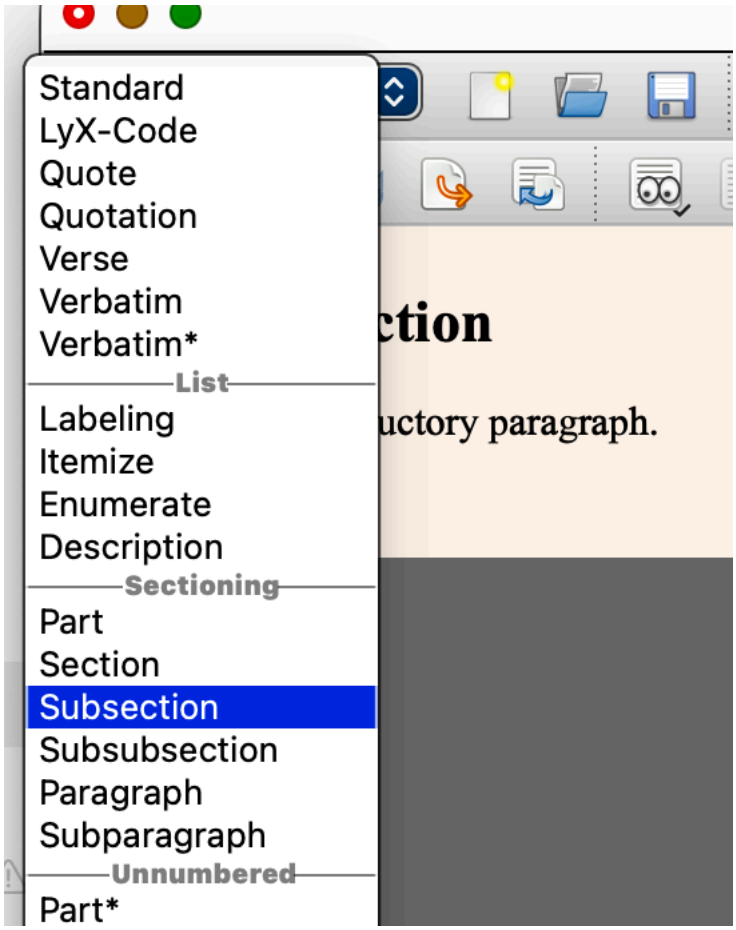

Figure 1.9: New Subsection Selection

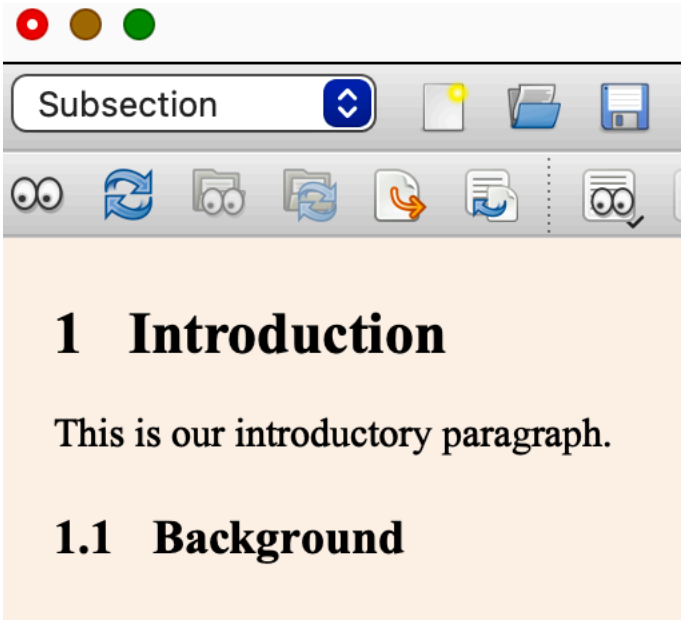

Figure 1.10: New Subsection Added

1.3.6 Add an author

Under your title, add your name.

Next select "Author" under the "Front Matter" section of the Environment window.

1.3.7 Table of Contents

We can add a table of contents (optional). As long as we are using sectioning, a table of contents will automatically generate once we select

1.3.8 Mathematical Equations

We can click the following button to insert a mathematical equation into a LyX document.

1.3.9 Insert LaTex Results

We can export our LaTex code that is produced from Stata with the *estout* commands. When you preview the document, you will notice that there is

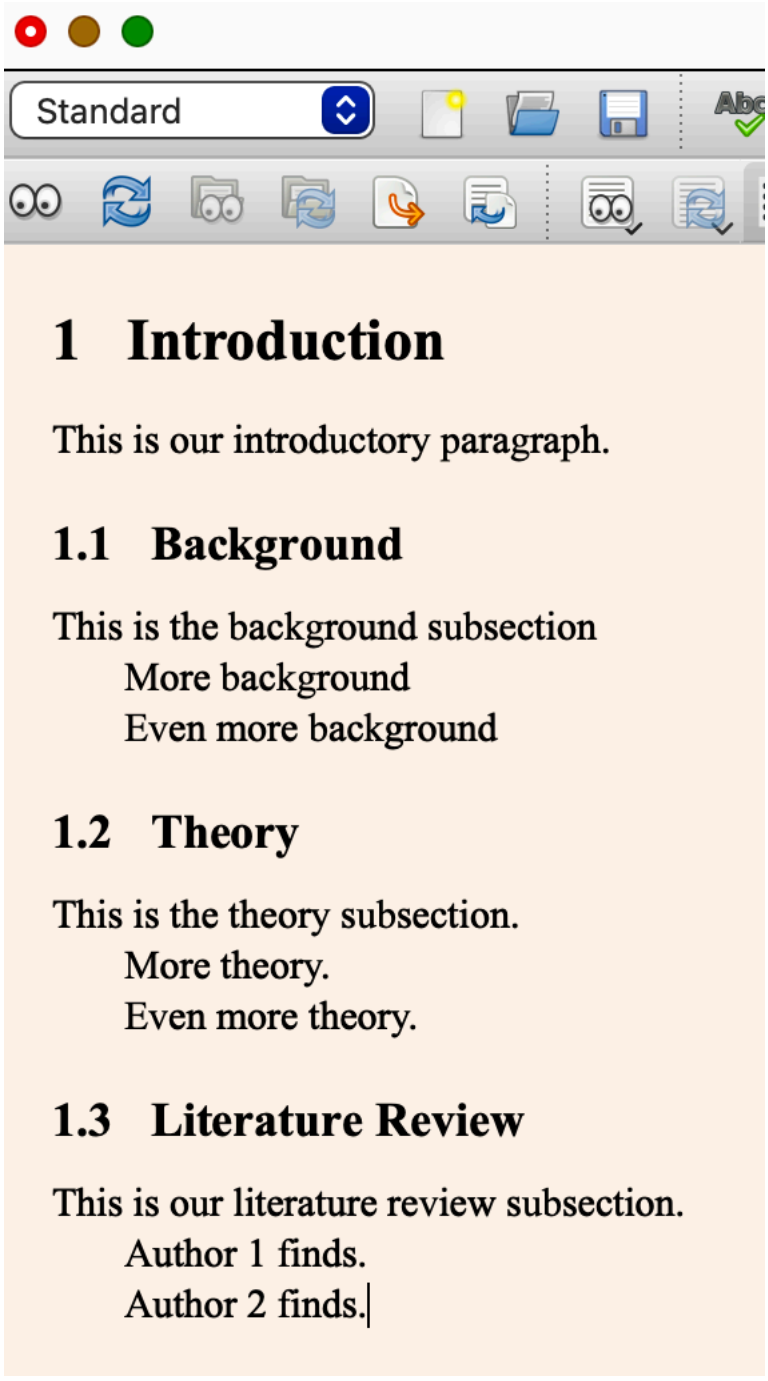

Figure 1.11: Additional subsections

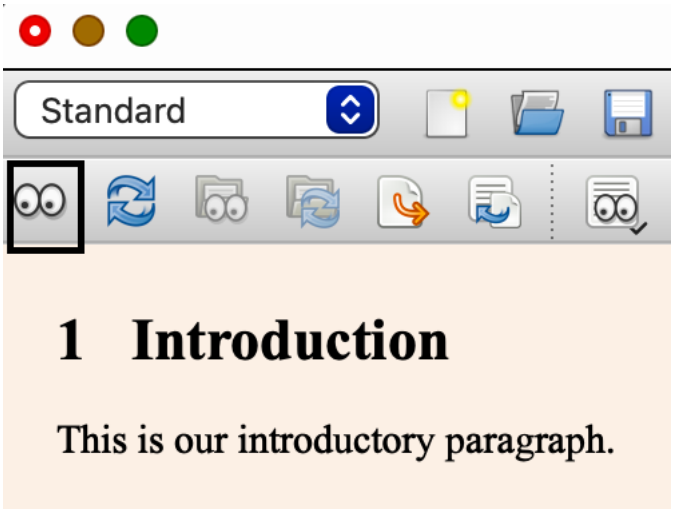

Figure 1.12: Preview your work

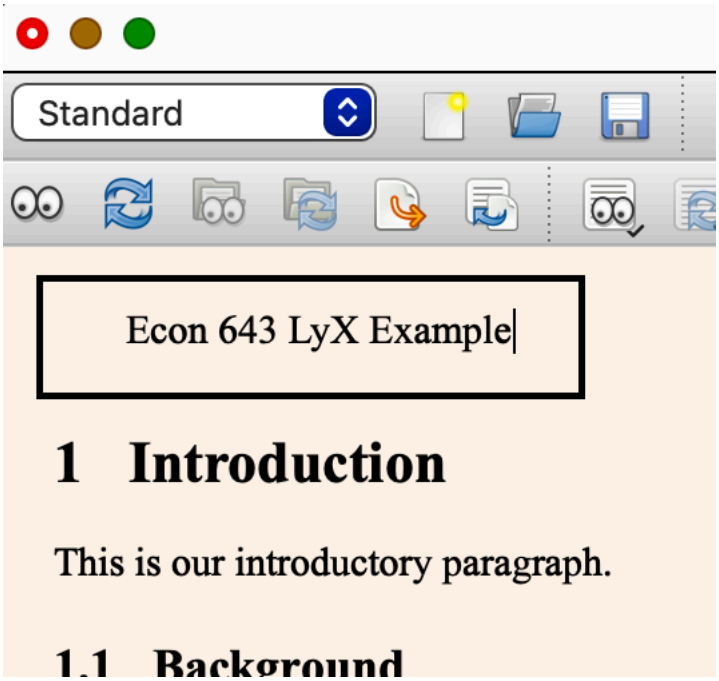

Figure 1.13: Add a Title

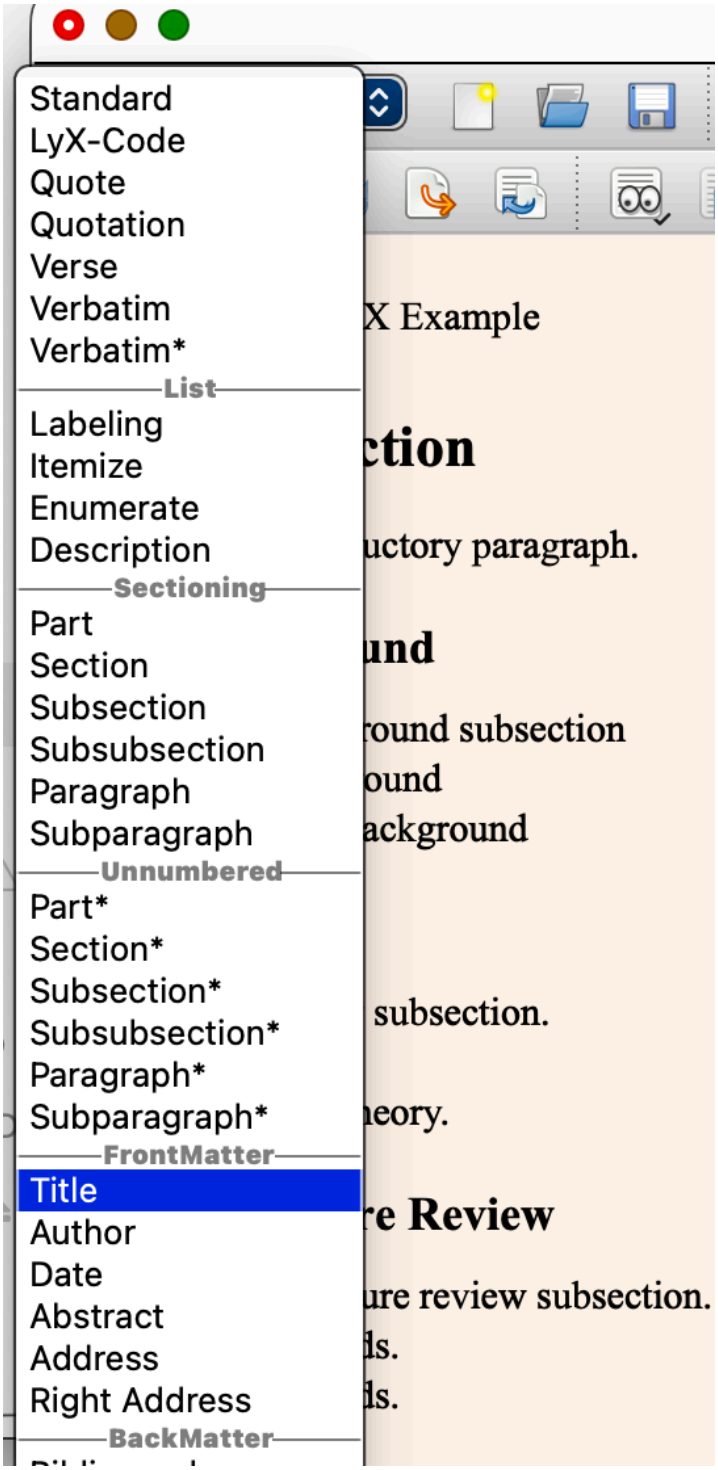

Figure 1.14: Title Option

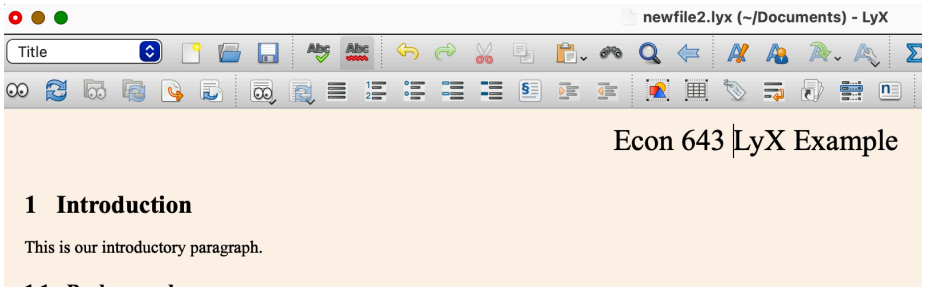

Figure 1.15: New Title

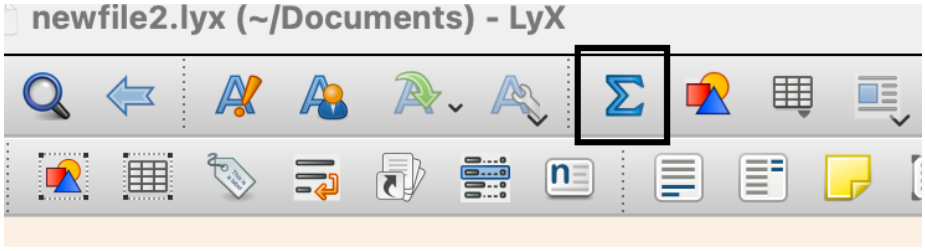

Figure 1.16: Mathematical Equation in LyX

LaTex code that automatically labels the table number.

To insert a place to insert the LaTex output from Stata, click Insert → Tex Code.

Now you will see a new box in your Lyx Document.

Next paste your LaTex code output from Stata into Lyx with right-click and Paste.

We will discuss *estout* in the next chapter.

1.3.10 Insert Figure

Our final tutorial will cover inserting graphs from Stata. We will cover exporting graphs from Stata a bit later.

We need to export our Stata histogram that we created. We will save it as a ".png" file.

Go to Insert → Float → Figure.

Now enter a title for the figure. We will use "Histogram of Automobile Price".

Next, we need to insert the histogram from Stata above the Figure 1: box but below Float Figure. Go to Insert → Graphics.

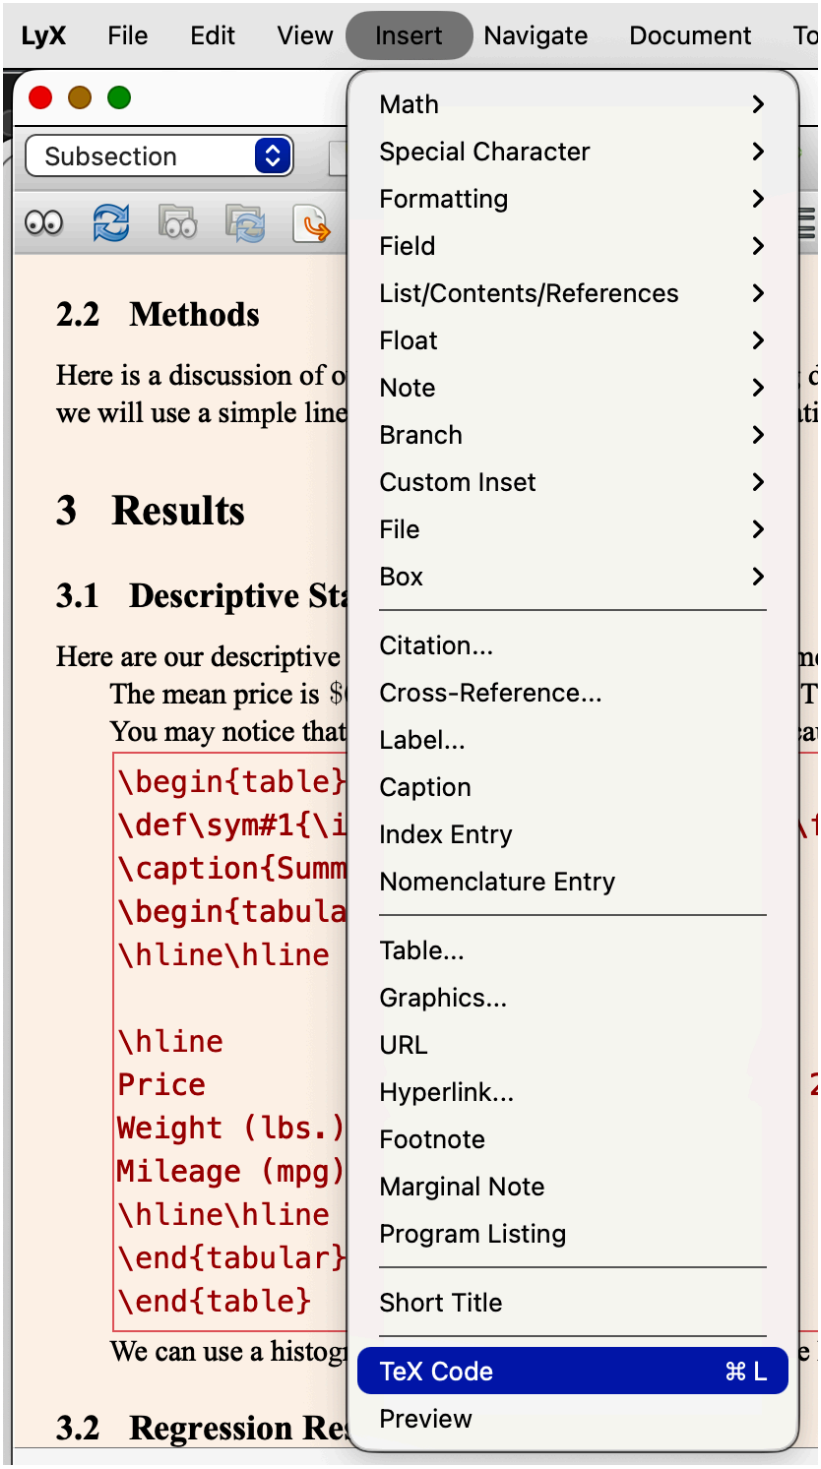

Figure 1.17: Insert Function

Figure 1.18: LaTex insert box

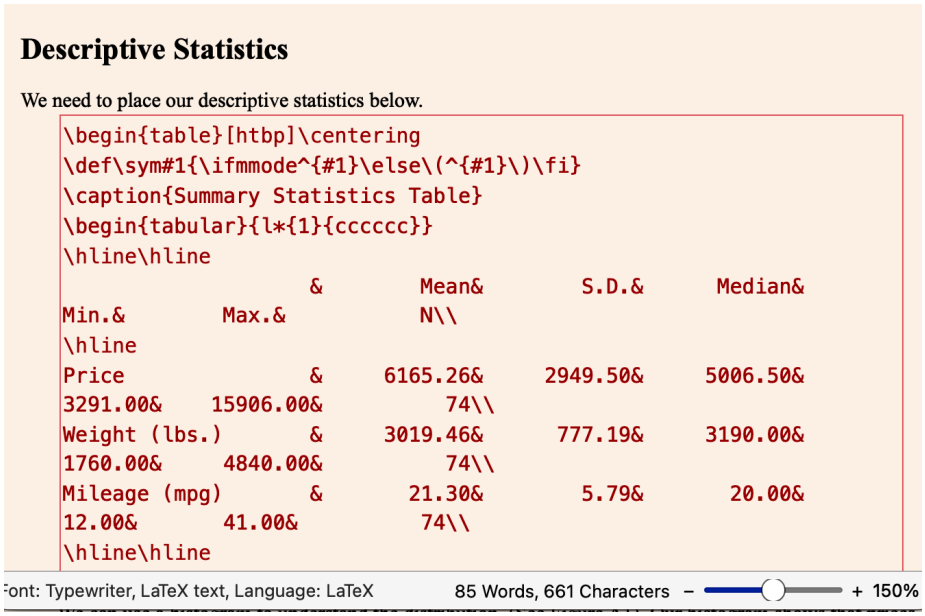

Figure 1.19: LaTex Right-Click Paste

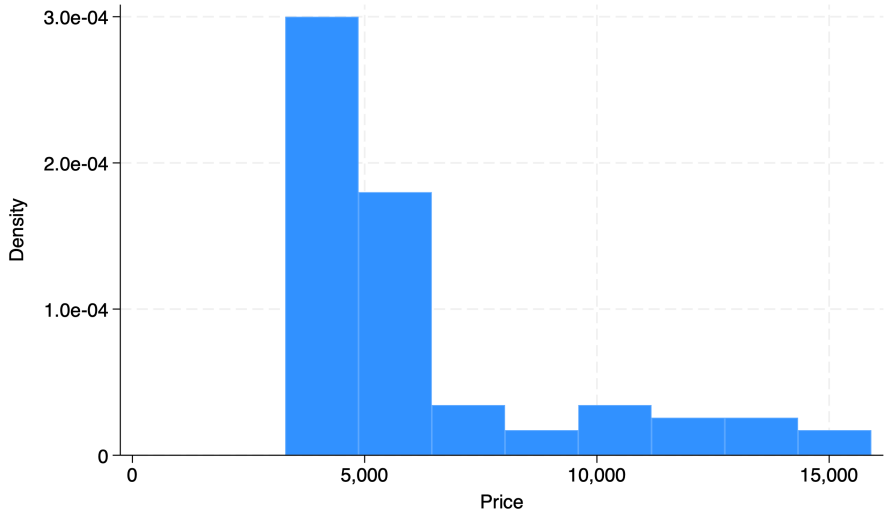

Figure 1.20: Histogram we want to insert

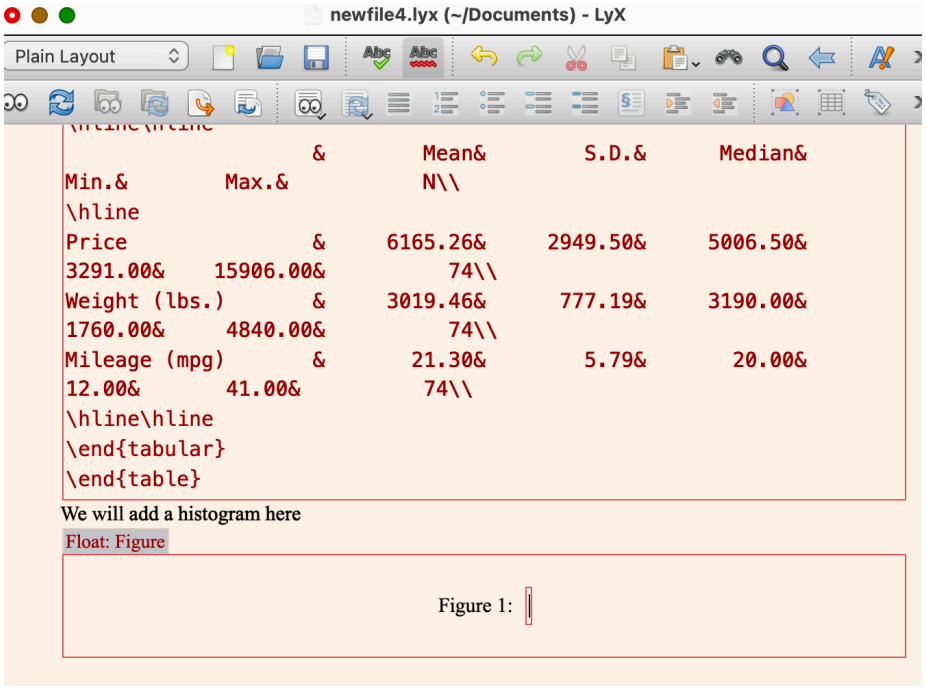

Figure 1.21: Insert Figure

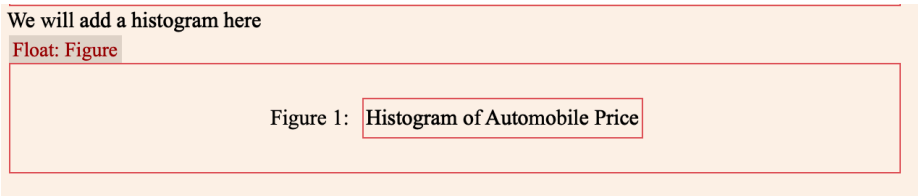

Figure 1.22: Figure Title

In the Graphics window, click browse and find your histogram ".png" file. Next, select "set width" and choose the size of your choice. Next, select "Column Width %" from the drop down menu next to "set width". Click "OK".

Your histogram will be inserted, but it may look funny.

Click on preview to see how well the histogram was inserted. You may need to play around with the settings. I have the size of the Stata graph window makes the graphic file larger.

1.4 Export Your LaTex file into PDF

Go to File → Export → Export As. Select the location of the folder you want to store the file. Next, enter the name of the file and select "PDF (pdflatex) (*.pdf)".

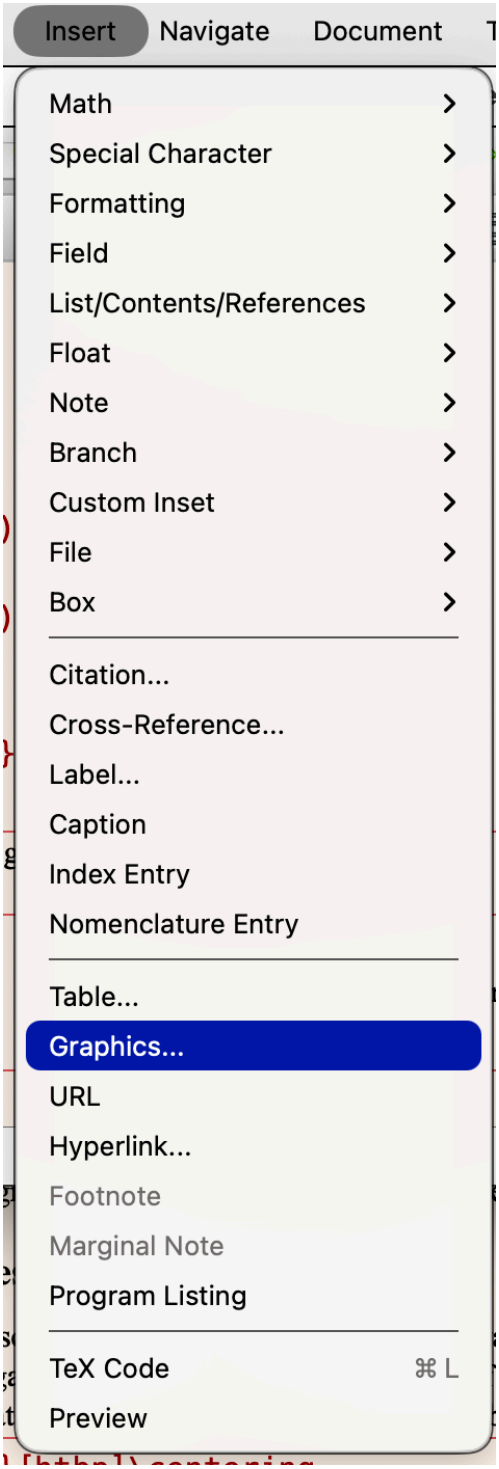

Figure 1.23: Insert Graphics

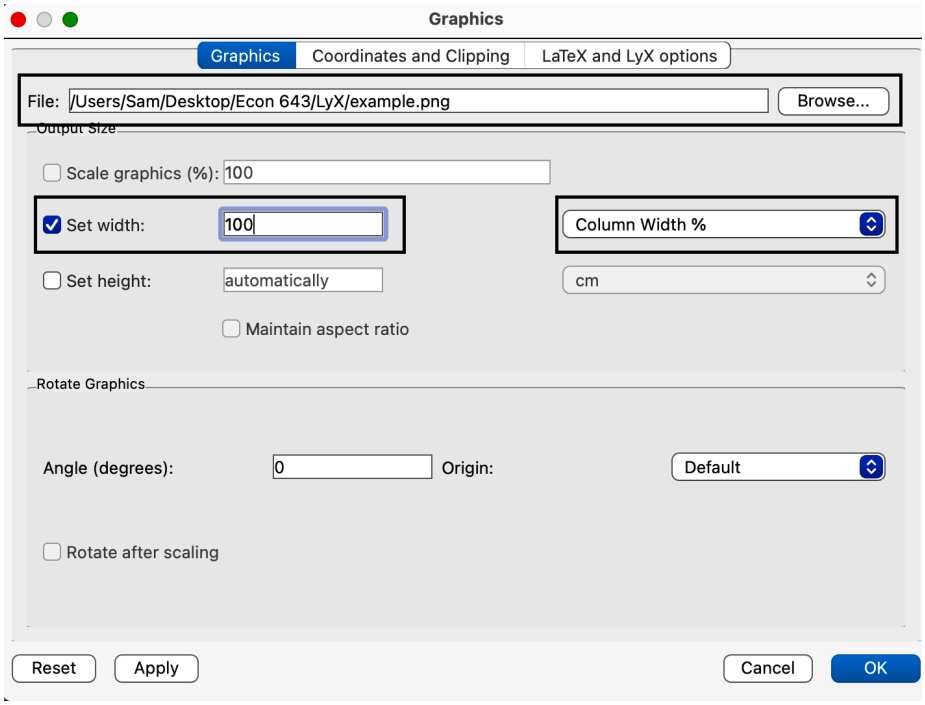

Figure 1.24: Graphics Window

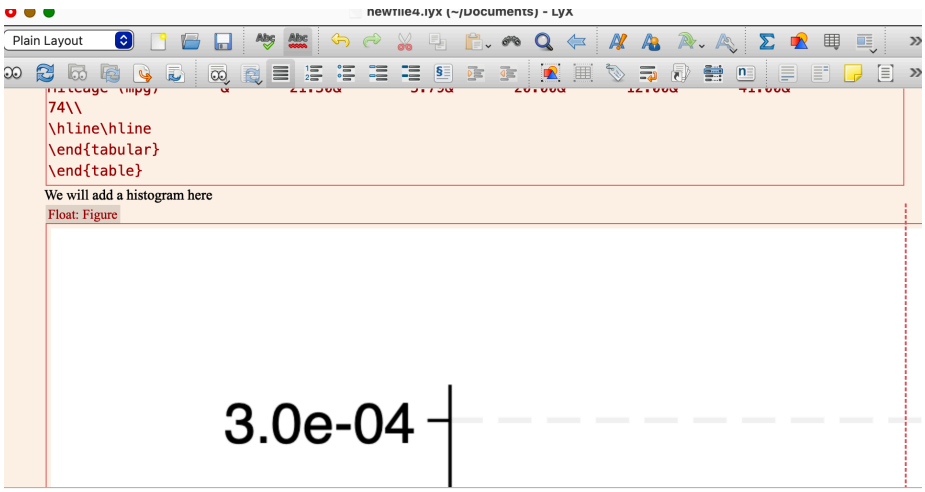

Figure 1.25: Inserted Histogram

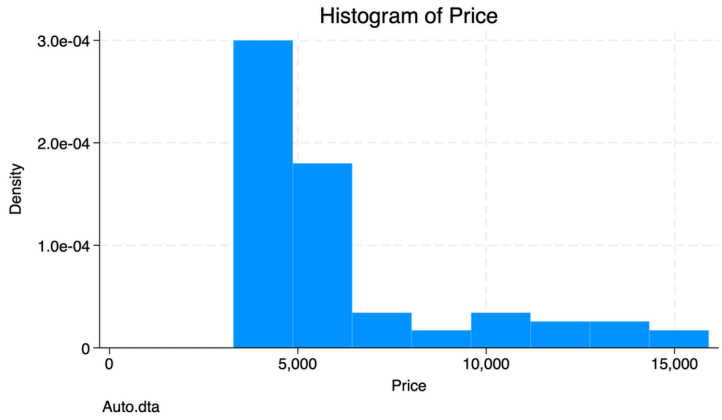

Figure 1: Histogram of Automobile Price

Descriptive Statistics

We need to place our descriptive statistics below.

Figure 1.26: Inserted Histogram PDF

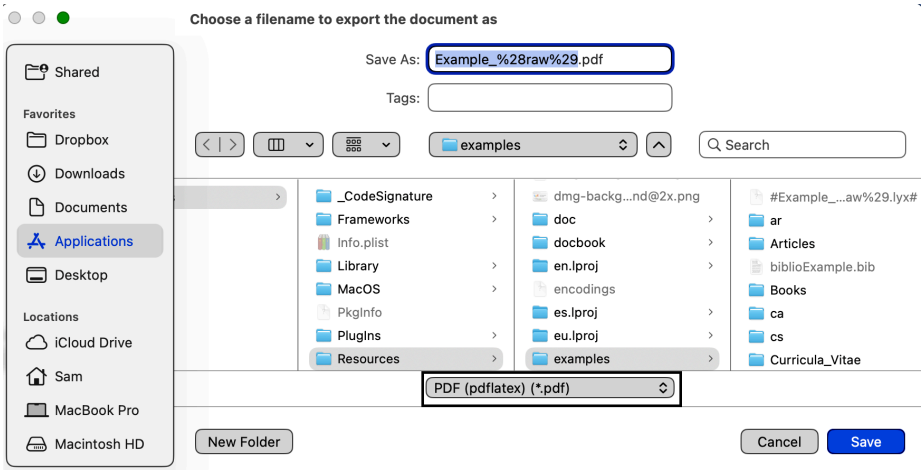

Figure 1.27: Export As in LyX

Chapter 2

Introduction to LaTex

I will provide a crash course on how to use LaTex to create mathematical equations. Kemp, et al. (2016) discuss how LaTeX is the "industry standard" typesetting system for writing mathematics. LaTeX is more flexible than standard word processors, such as MSWord), produces vastly better-looking results.

Learning how to create mathematical equations with LaTex will help you with your homework and projects through the empirical sequence.

With LaTex, we can turn y=bx^2+c into

$$y = \beta x^2 + c$$

If you want a mean, you don't have to type mu or average. Just use LaTex by entering "\ mu" which results in μ. Do you want to expected value of x? You can just use E(x), but it looks better with LaTex with $E(x)$.

2.1 How to use mathematical symbols

We typicall use the "\" to initate a mathemetical symbol. We can use"^" for superscripts and "_" *for subscripts. For example, we can type \ sum^N*{i=1} x_{i} and it will become

$$\sum_{i=1}^{N} x_i$$

You may have noticed that the subscripts had {} brackets. When we want to include an equation in the subscript or subscript, we need to include {} brackets, such as x^{2a+3b}. This will result in x^{2a+3b}

2.2 Overview of mathematical symbols

I think the following is a helpful reference guide for mathematical symbols in LaTex

$\frac{abc}{xyz}$	\frac{abc}{xyz}	$\overline{abc}$	\overline{abc}	$\overrightarrow{abc}$	\overrightarrow{abc}
f'	f'	$\underline{abc}$	\underline{abc}	$\overleftarrow{abc}$	\overleftarrow{abc}
$\sqrt{abc}$	\sqrt{abc}	$\widehat{abc}$	\widehat{abc}	$\overbrace{abc}$	\overbrace{abc}
$\sqrt[n]{abc}$	\sqrt[n]{abc}	$\widetilde{abc}$	\widetilde{abc}	$\underbrace{abc}$	\underbrace{abc}

Source: https://quickref.me/latex.html

2.3 Greek letters

α	\alpha	κ	\kappa	ψ	\psi	$\digamma$	\digamma	Δ	\Delta	Θ	\Theta
β	\beta	λ	\lambda	ρ	\rho	ε	\varepsilon	Γ	\Gamma	Υ	\Upsilon
χ	\chi	μ	\mu	σ	\sigma	$\varkappa$	\varkappa	Λ	\Lambda	Ξ	\Xi
δ	\delta	ν	\nu	τ	\tau	φ	\varphi	Ω	\Omega		
ϵ	\epsilon	o	o	θ	\theta	ϖ	\varpi	Φ	\Phi	$\aleph$	\aleph
η	\eta	ω	\omega	υ	\upsilon	ϱ	\varrho	Π	\Pi	$\beth$	\beth
γ	\gamma	ϕ	\phi	ξ	\xi	ς	\varsigma	Ψ	\Psi	$\daleth$	\daleth
ι	\iota	π	\pi	ζ	\zeta	ϑ	\vartheta	Σ	\Sigma	$\gimel$	\gimel

Source: https://quickref.me/latex.html

2.4 Accents and Braces

Mathematical font

$\mathcal{A}\mathcal{B}\mathcal{C}\mathcal{D}\mathcal{E}\mathcal{F}\mathcal{G}\mathcal{H}\mathcal{I}\mathcal{J}\mathcal{K}\mathcal{L}\mathcal{M}\mathcal{N}\mathcal{O}\mathcal{P}\mathcal{Q}\mathcal{R}\mathcal{S}\mathcal{T}\mathcal{U}\mathcal{V}\mathcal{W}\mathcal{X}\mathcal{Y}\mathcal{Z}$
`\mathcal{` *letter* `}`

Superscript & Subscript

x^y	`x^y`	x^{a+b}	`x^{a+b}`
x_y	`x_y`	x_{a+b}	`x_{a+b}`

Braces

`\overbrace{ ... }^{` *text over brace* `}`
`\underbrace{ ... }_{` *text under brace* `}`

Accents

$\hat{a}$	`\hat{a}`	$\bar{a}$	`\bar{a}`	$\mathring{a}$	`\mathring{a}`
$\check{a}$	`\check{a}`	$\dot{a}$	`\dot{a}`	$\vec{a}$	`\vec{a}`
$\tilde{a}$	`\tilde{a}`	$\ddot{a}$	`\ddot{a}`	$\widehat{AAA}$	`\widehat{AAA}`

Source: https://www.tilburgsciencehub.com/topics/research-skills/templates-dynamic-content/templates/amsmath-latex-cheatsheet/

2.5 Binary Relations and Operators

Source: https://www.tilburgsciencehub.com/topics/research-skills/templates-dynamic-content/templates/amsmath-latex-cheatsheet/

Binary relations

$\neq$	`\ne`	$\leqslant$	`\le`	$\geqslant$	`\ge`
$\equiv$	`\equiv`	$\ll$	`\ll`	$\gg$	`\gg`
$\doteq$	`\doteq`	$\sim$	`\sim`	$\simeq$	`\simeq`
$\subset$	`\subset`	$\supset$	`\supset`	$\approx$	`\approx`
$\subseteq$	`\subseteq`	$\supseteq$	`\supseteq`	$\cong$	`\cong`
$\in$	`\in`	$\ni$	`\ni`	$\propto$	`\propto`
$\mid$	`\mid`	$\parallel$	`\parallel`	$\perp$	`\perp`

It's possible to negate these symbols by prefixing them with `\not` (for example: $\not\equiv$ `\not\equiv`)

Binary operators

$\pm$	`\pm`	$\mp$	`\mp`	$\cdot$	`\cdot`
$\div$	`\div`	$\times$	`\times`	$\setminus$	`\setminus`
$\star$	`\star`	$\cup$	`\cup`	$\cap$	`\cap`
$*$	`\ast`	$\circ$	`\circ`	$\bullet$	`\bullet`
$\oplus$	`\oplus`	$\ominus$	`\ominus`	$\odot$	`\odot`
$\oslash$	`\oslash`	$\otimes$	`\otimes`	$\smallsetminus$	`\smallsetminus`

Figure 2.1: Binary Relations and Operators

Chapter 3

Incorporating LaTex output from Stata

3.1 Table commands

Table command is provides a basis to create customized tables for descriptive statistics. However, we can use the *collect* command after the *table* command to export our results into various documents of our choice.

We have seen the table command before, but let's look at some frequency tables using the *table* command. We use *statistics(frequency)* as the option

```
table (industry) (union), statistic(frequency)
```

	Union member		
	Non-Union	Union	Total
2-digit NAICS			
11-Agriculture	106	7	113
21-Mining	49	7	56
23-Construction	541	78	619
31-33 Mfg Durable	597	45	642
31-33 Mfg Non-durable	290	23	313
42-Wholesale	174	5	179
44-45 Retail	1,016	26	1,042
48-49 Transportation and Warehousing	380	96	476
22-Utilities	82	23	105
51-Information	163	14	177
52-Finance and Insurance	451	6	457

```
  53-Real Estate and Leasing           |        174       3     177
  54-Professional Services             |        741       9     750
  55-56 Management and Mng Services    |        398      15     413
  61-Educational Services              |        648     257     905
  62-Health Care and Social Services   |      1,428     101   1,529
  71-Arts and Entertainment            |        169      14     183
  72-Accommodation and Food Services   |        609      16     625
  814110-Private Households             |         36              36
  81-Other Services                    |        335      11     346
  92-Public Administration             |        440     174     614
  Total                                |      8,827     930   9,757
-------------------------------------------------------------------
```

Next, let's add percentages along with frequencies with *statistic(percent)*.

```
table (industry) (union), statistic(frequency) statistic(percent)
```

```
                                       |         Union member
                                       |  Non-Union   Union    Total
---------------------------------------+----------------------------
2-digit NAICS                          |
  11-Agriculture                       |
    Frequency                          |        106       7      113
    Percent                            |       1.09    0.07     1.16
  21-Mining                            |
    Frequency                          |         49       7       56
    Percent                            |       0.50    0.07     0.57
  23-Construction                      |
    Frequency                          |        541      78      619
    Percent                            |       5.54    0.80     6.34
  31-33 Mfg Durable                    |
    Frequency                          |        597      45      642
    Percent                            |       6.12    0.46     6.58
  31-33 Mfg Non-durable                |
    Frequency                          |        290      23      313
    Percent                            |       2.97    0.24     3.21
  42-Wholesale                         |
    Frequency                          |        174       5      179
    Percent                            |       1.78    0.05     1.83
  44-45 Retail                         |
    Frequency                          |      1,016      26    1,042
    Percent                            |      10.41    0.27    10.68

-------------------------------------------------------------
```

We can reverse the order of the nesting within columns as well.

```
table () (sex union) () if prerelg==1, statistic(frequency) statistic(percent) statisti
```

```
                            |               Individual's Sex
                            |          Male                  Female
                            |      Union member           Union member
                            |  Non-Union      Union   Non-Union      Union
----------------------------+-----------------------------------------------
Frequency                   |      4,509        516       4,318        414
Percent                     |      46.21       5.29       44.26       4.24
Mean                        |
  Weekly earnings in dollars |   1800.009    1968.19    1326.819   1488.601
Standard deviation          |
  Weekly earnings in dollars |   2021.755   1851.626    1540.911   1054.904
Median                      |
  Weekly earnings in dollars |       1220       1540         962       1300
-------------------------------------------------------------------------------
```

3.1.3 Customize the format

We can customize the formats with *sformat* to add string characters and *nformat* to format the numerics.

```
table () (sex union) () if prerelg==1, statistic(frequency) statistic(percent) statisti
```

```
                            |               Individual's Sex
                            |          Male                  Female
                            |      Union member           Union member
```

```
                            |  Non-Union      Union   Non-Union      Union
----------------------------+-----------------------------------------------
Frequency                   |      4,509        516       4,318        414
Percent                     |     46.21%      5.29%      44.26%      4.24%
Mean                        |
  Weekly earnings in dollars |   $1800.01   $1968.19    $1326.82   $1488.60
Standard deviation          |
  Weekly earnings in dollars |   $2021.76   $1851.63    $1540.91   $1054.90
Median                      |
  Weekly earnings in dollars |   $1220.00   $1540.00     $962.00   $1300.00
-------------------------------------------------------------------------------
```

3.2 Collect commands

Stata has a collection of *collect* commands to help you format and export your descriptive statistics after the *table* command.

We can preview our table comments with the *collect preview* command.

```
collect preview
```

```
                            |                Individual's Sex
                            |          Male                   Female
                            |      Union member           Union member
                            |  Non-Union      Union   Non-Union      Union
----------------------------+-----------------------------------------------
Frequency                   |      4,509        516       4,318        414
Percent                     |     46.21%      5.29%      44.26%      4.24%
Mean                        |
  Weekly earnings in dollars |   $1800.01   $1968.19    $1326.82   $1488.60
Standard deviation          |
  Weekly earnings in dollars |   $2021.76   $1851.63    $1540.91   $1054.90
Median                      |
  Weekly earnings in dollars |   $1220.00   $1540.00     $962.00   $1300.00
-------------------------------------------------------------------------------
```

We can change our labels if we want with the *modify* option. We can check the change with the *collect label list* command.

```
collect label dim sex "Sex of Individual", modify
collect label list sex
collect preview
```

```
  Collection: Table
   Dimension: sex
       Label: Sex of Individual
Level labels:
          .m  Total
           0  Male
           1  Female
```

```
------------------------------------------------------------------------------
                             |               Sex of Individual
                             |          Male                   Female
                             |      Union member           Union member
                             |  Non-Union      Union   Non-Union      Union
-----------------------------+------------------------------------------------
Frequency                    |      4,509        516       4,318        414
Percent                      |     46.21%      5.29%      44.26%      4.24%
Mean                         |
  Weekly earnings in dollars |   $1800.01   $1968.19    $1326.82   $1488.60
Standard deviation           |
  Weekly earnings in dollars |   $2021.76   $1851.63    $1540.91   $1054.90
Median                       |
  Weekly earnings in dollars |   $1220.00   $1540.00     $962.00   $1300.00
------------------------------------------------------------------------------
```

Let's modify the other variable, too.

```
collect label dim union "Union Status", modify
collect label list union
collect preview
```

```
  Collection: Table
   Dimension: union
       Label: Union Status
Level labels:
          .m  Total
           0  Non-Union
           1  Union
```

```
------------------------------------------------------------------------------
                             |               Sex of Individual
                             |          Male                   Female
                             |      Union Status           Union Status
                             |  Non-Union      Union   Non-Union      Union
```

```
----------------------------+-------------------------------------------
Frequency                   |     4,509        516       4,318        414
Percent                     |    46.21%      5.29%      44.26%      4.24%
Mean                        |
  Weekly earnings in dollars |  $1800.01   $1968.19    $1326.82   $1488.60
Standard deviation          |
  Weekly earnings in dollars |  $2021.76   $1851.63    $1540.91   $1054.90
Median                      |
  Weekly earnings in dollars |  $1220.00   $1540.00     $962.00   $1300.00
-------------------------------------------------------------------------
```

We can use the *collect dims* command to get the collect dimensions.

```
collect dims
collect label list result, all
```

```
Collection dimensions
Collection: Table
------------------------------------------
                     Dimension   No. levels
------------------------------------------
Layout, style, header, label
                        across   2
                        cmdset   1
                       colname   1
                       command   1
                        result   5
                           sex   2
                       statcmd   5
                         union   2
                           var   2

Style only
                  border_block   4
                     cell_type   4
          header_cell_contents   3
------------------------------------------

  Collection: Table
   Dimension: result
       Label: Result
Level labels:
   frequency  Frequency
        mean  Mean
```

```
      median  Median
     percent  Percent
          sd  Standard deviation
```

We can export our descriptive statistics table into various formats. Let's export to LaTex.

```
collect export example.tex, replace
```

Let's use *collect export* into Markdown.

```
collect export example.md, replace
```

Let's use *collect export* into Excel. We have additional commands with *putexcel* to generate a report template and then use *collect export* to export the descriptive statistics table.

```
collect export example.xlsx, replace
```

Let's use *collect export* into MS Word. We have additional commands with *putdocx* to generate a report template and then use *collect export* to export the descriptive statistics table.

```
collect export example.docx, replace
```

There is also a suite of commands with *putpdf* to export tables into a pdf file

Chapter 4
